PROFESSIONAL SUMMARY

Full-stack developer with over three years of experience delivering production web applications in fintech, e-commerce, healthcare, and the Stellar/Web3 ecosystem. Skilled in managing projects from requirements gathering to deployment, consistently delivering ahead of schedule. Proficient across frontend, backend, databases, and blockchain technologies.

WORK HISTORY

2023 – Present

Freelance Full-Stack Developer

Self-Employed | Remote

- Developed Quidly, a survey-rewards platform (React, Supabase) featuring integrations with third-party survey providers and tier-based earnings for a private client. Delivered on May 3, 2026, three days ahead of the scheduled deadline.
- Completed Upwork projects, optimising conversion funnels and developing a React-based booking/POS system for a service business to streamline the sales process.
- Developed an e-commerce site for an Oriflame consultant, incorporating live price scraping and WhatsApp checkout integration to enhance customer experience.

PROJECTS

RemitX: Stellar-based cross-border remittance platform (Next.js, Prisma/Postgres, Stellar SDK, Soroban escrow contracts); preparing a 100-issue open-source bounty backlog for contributors.

MarketForge: Multi-vendor marketplace for Nigeria (Next.js, Express, MongoDB, Paystack) with smart delivery routing across 36 cities.

Medicare HMS: Full-stack hospital management system (Vite, React, TypeScript, Supabase): 52 screens, 10 staff roles, and row-level-security-based access control.

StellarPay, TrustID, Agrochain, Stellar-Vault: Suite of Soroban-powered fintech tools: payroll/invoicing, decentralized identity with zero-knowledge KYC, agricultural supply-chain finance, and a SEP-0056 yield aggregator.

Active contributor to Stellar Wave / Drips Wave bounty programs across Rust/Soroban, Go, NestJS, React, GraphQL, accessibility, and security issues. GitHub Pull Shark achievement (×2).
